Requirements for Remote Administration

FoxT Manager can be managed in any browser that supports http 1.0 or later, HTML 4 and SSL with 128-bit encryption strength.

Authentication for login to the administration interface can be configured globally or per administrator to require any one of the following:

- RSA Authentication Manager (ACE/Server) and RSA SecurID tokens
- Aladdin PremierAccess Server or SafeWord Management Console and SafeWord tokens
- FoxT Desktop
- Third-party CA certificate or FoxT certificate installed on the browser
- Password

An authenticated, authorized administrator has access to the full GUI. A sub-administrator's access to menu operations can be restricted to specific menus, hosts, user accounts, etc.
